Summary

Second-year BA student in Management Information Systems (College of Management). Hands-on with Python, SQL and advanced Excel, with four years of operations, logistics and customer-facing work. Looking for a research or data internship where I can learn fast and build data tools.

Skills

Languages and tools: Python (openpyxl, JSON), SQL, Advanced Excel (Pivot Tables, XLOOKUP), Microsoft Office

Concepts: statistical analysis, business process analysis, ERP and inventory logic

Work skills: problem solving under pressure, systems thinking, supplier and inventory management, customer service

Projects

Automated Business Reporting (Python, openpyxl, JSON)

- Built a Python tool that reads hierarchical JSON data, runs aggregations and weighted averages, and generates a formatted Excel report (column widths, conditional formatting).
- Built several report types using the same approach, including inventory, orders, branch sales, QA and employee directories.

Experience

D. Saar Beverages - Warehouse Coordinator and Sales Representative | 2023-2024

- Managed warehouse inventory with computerized systems and worked with suppliers.
- Coordinated logistics, solved operational issues in real time, and handled sales to business and private customers.

ZARA - Logistics and Inventory Worker | 2022-2023

- Ran regular inventory checks and goods distribution in a fast retail environment.
- Worked shifts in a high-pressure setting.

Strauss Water - Customer Service and Retention Representative | 2021-2022

- Handled complex inquiries at an international company using CRM systems, while meeting KPI targets.
- Solved technical and data issues on my own and made upsell sales during retention calls.

AVO (retail startup) - Operations Worker | 2020-2021

- Worked on supply chain steps including fast inventory sorting and packing, using computerized systems, with a team and tight deadlines.
